

ZOOM WEBINAR

"A guide to restoring the little things that run the world"

A presentation by Doug Tallamy followed by Q&A

Tuesday, April 1, 2025 from 6:00 to 7:30 PM

We are at a critical point of losing so many species from local ecosystems that their ability to produce the oxygen, clean water, flood control, pollination, pest control, carbon storage, et cetera, i.e., the ecosystem services that sustain us, will become seriously compromised.

Douglas W. Tallamy is an educator, author, and entomologist, specializing in the relationship between plants and insects. He is a professor at the University of Delaware and co-founder of Homegrown National Park, a grassroots movement to create more native plant habitats. His books include *Bringing Nature Home* and *How You Can Sustain Wildlife with Native Plants*.
